

Electricity & Safety Unit

Teachers notes - Lesson 2 - Slide 18

Dangerous situation 1

Explain the following scenario to your students.

Danny is unloading some metal poles and aluminium irrigation pipes from his ute and trailer. He is concentrating on moving the objects the quickest way possible.

Explain to your students the dangers involved in this scenario:

- While the powerlines are in the next block of land, it is very important for Danny to look up first before unloading his trailer. The objects he is carrying are quite tall, so could make contact with powerlines if they are above him
- If your students see an adult carrying large objects that could make contact with powerlines, make sure they look up first
